

## Departure Terminals

*Manufactured to State Road Agency Specifications*

Departure terminals or trailing terminals are designed to anchor safety barrier systems and introduce the necessary tensile and flexural strength required for safe vehicle containment and re-direction throughout the length-of-need section.

Departure terminals should only be installed on the trailing end of a guardrail system that is located outside the clear zone of approaching traffic.

### Specifications

- Manufactured in accordance with state road agency specifications.
- Hot dip galvanised components in accordance with AS/NZS 4680.

### Features

- Provides an economical solution for anchoring the safety barrier system.
- Attaches directly to w-beam guardrail.
